**Ansys Mechanical tips that if
you don't already know, you
should**

#5 Filter Tool

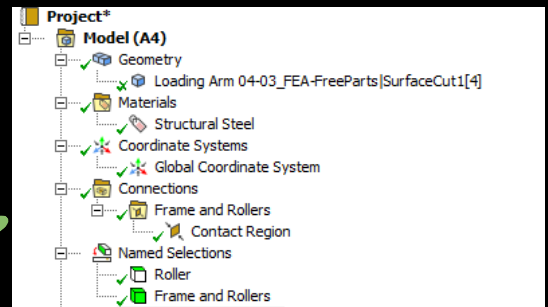

armechsolutions.com

Filter Tool

Filter what's visible in the model tree to make finding things in large complicated models fast and efficient.

It can be used for many things, but we especially love how easy it makes finding contacts of specific parts by filtering by visible bodies.

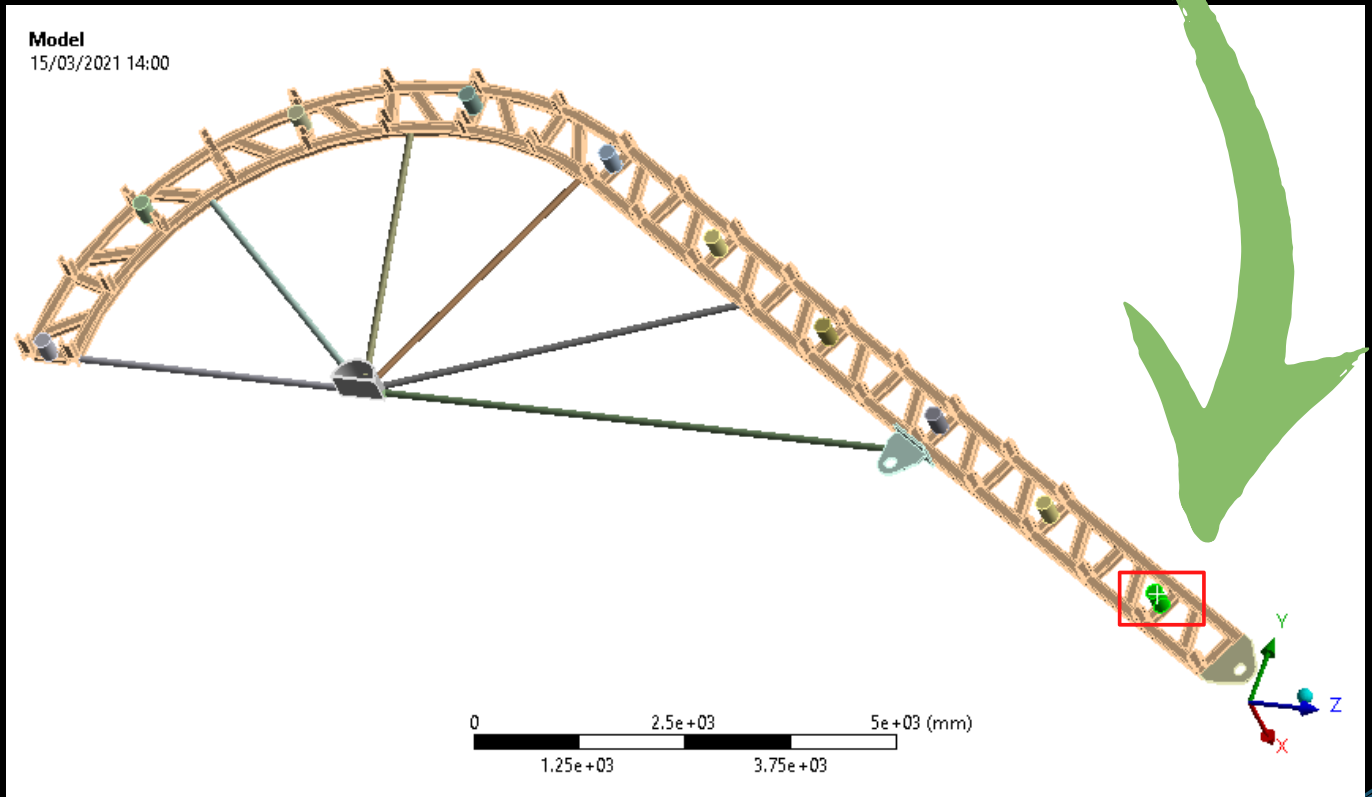

This

Becomes This

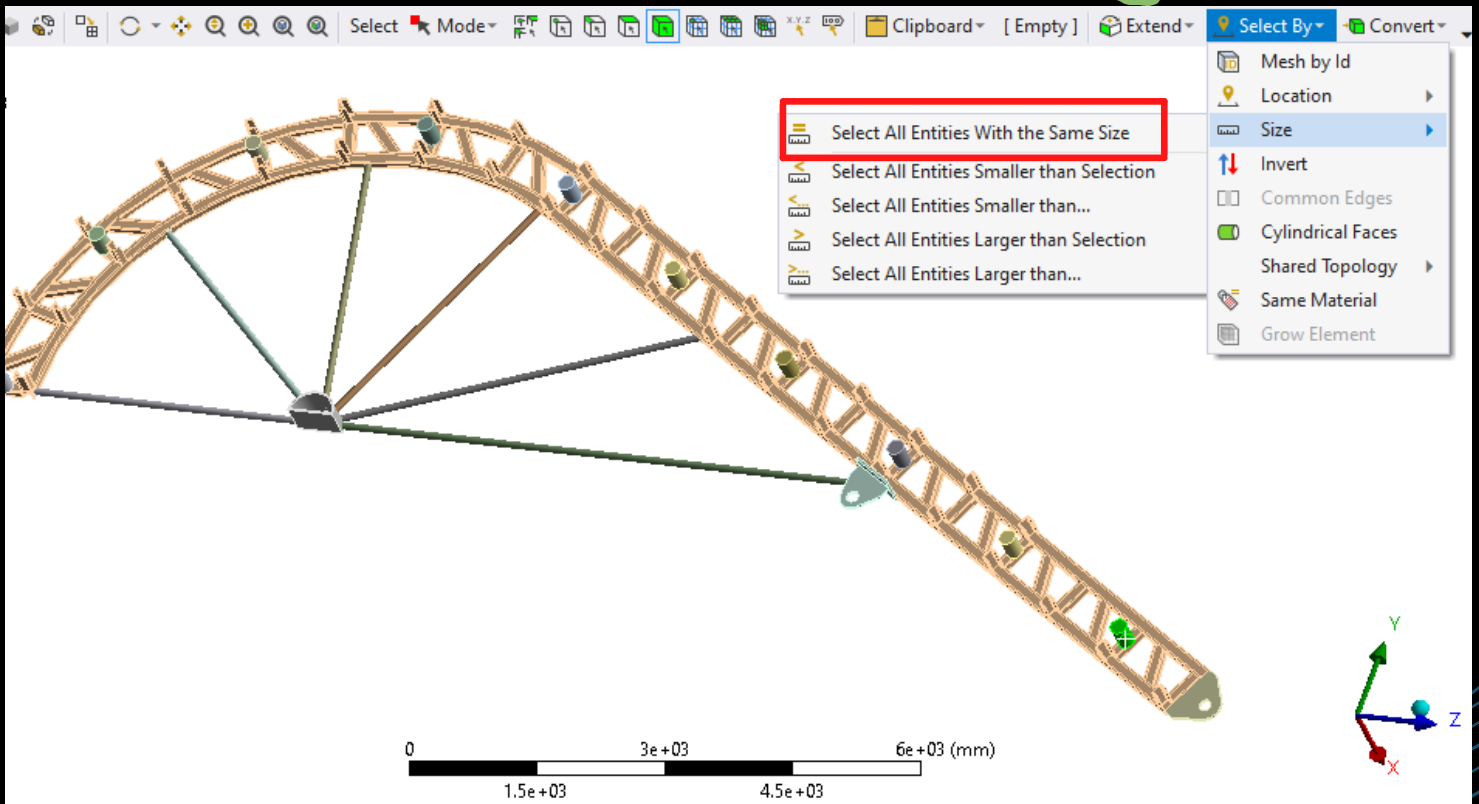

Step 1

Select the body that you're interested in

Step 2

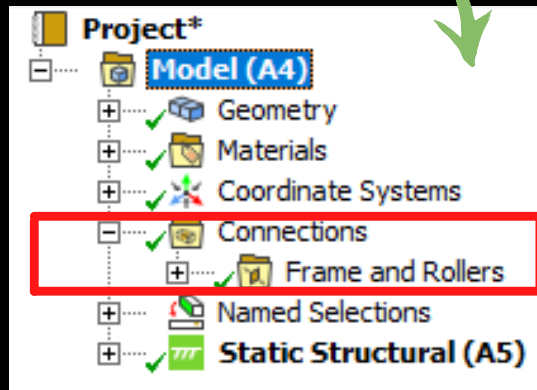

If there are multiple instances you can use the Select By Size tool:

Step 3

Right click and select "Hide all other bodies".

Right click and select "Filter tree based on visible bodies"

Right click and select "Show all bodies".

The tree will not update unless done so manually.

Your tree is now filtered and you'll only see contacts for the bodies you're interested in
